## Project

**Inappropriate Language and Hate Speech Recognition**  
Developed algorithms and models using NLP and machine learning techniques to automatically detect and flag inappropriate language and hate speech in text-based content. Contributed to the creation of tools and technologies aimed at reducing online abuse and fostering a respectful online community.

**An Advanced Crime Classification using Deep Learning**  
We propose a cutting-edge crime classification system that utilizes deep learning algorithms to automatically analyze and classify criminal activities. This system ensures precise and timely classifications, allowing law enforcement agencies to optimize resource allocation Effectively

**VIRTUALMOUSE:FUSION OF HAND GESTURES AND EYE TRACKING**  
Developed a virtual mouse system integrating hand gesture recognition using MediaPipe and eye tracking technology in Python. Enabled cursor control through hand gestures and eye movements, enhancing accessibility and usability for users, especially those with mobility impairments.
